### Question #1

Topic 1

Which of the following statements is true for the Form Designer? a) To add a field to the form layout, drag the field from the Fields tab to the desired destination on the form. b) To create a new field on a form's table, drag the appropriate data type from the Field Types tab to the form and then configure the new field. c) To remove a field from the form layout, hover over the field to enable the Action buttons, and select the Delete (X) button. d) To add a section to the form layout, drag it from the Field Types tab to the desired destination on the form.

- A. a, b, c, and d
- B. b, c, and d
- C. a, b, and d
- D. a, b, and c

**Correct Answer:** D

## Question #2

Which of the following are configured in an Email Notification? a) Who will receive the notification. b) What content will be in the notification. c) When to send the notification. d) How to send the notification.

- A. a, b and c
- B. a, b, and d
- C. b, c and d
- D. a, c and d

**Correct Answer: A**

Reference:

[https://hi.service-now.com/kb\\_view.do?sysparm\\_article=KB0712569](https://hi.service-now.com/kb_view.do?sysparm_article=KB0712569)*Community vote distribution*

A (100%)

**✉️ D\_Ogi** 4 months, 2 weeks ago

I think all a, b, c and d are valid. "d" is valid answer as we define how we send the notification: by "how" I mean it's content type, to include or not a push notification as well as SMS and to choose to make it a part of digest.

Copied from the provided link, "Update sets work in scoped apps just like they do in global scope. But there is a better way to move scoped apps from one instance to another. This capability is called "publish" and it allows you to move an application just like you would with a single executable. The publish capability checks for dependencies and locks the application in the instance where it has been moved so that no changes can be made". for option B

upvoted 1 times

## Question #4

Which one of the following is NOT a debugging strategy for client-side scripts?

- A. g\_form.addInfoMessage()
- B. Field Watcher
- C. jslog()
- D. gs.log()

**Correct Answer:** D

Reference:

upvoted 2 times

 **sg\_100** 1 year, 3 months ago

B! (Ref Tokyo Documentation)

Notifications that have the same target table and recipients are considered duplicates if the weights are different. If weights are same, an additional evaluation is done to check if the subject and the body (excluding watermark) are same to qualify as duplicate notification. When there are duplicate notifications, the system only sends the notification with the highest weight. All other notifications are moved from the Outbox to the Skipped mailbox. The default value 0 causes the system to always send the notification (assuming the conditions are met).

✉️  **tiji834** Most Recent 10 months, 3 weeks ago

But the problem is, that g\_scratchpad is also not available in Async BR...  
upvoted 2 times

✉️  **Ricou** 10 months, 4 weeks ago

**Selected Answer: A**

Business Rules often use the current and previous objects in their script logic.

The current object is automatically instantiated from the GlideRecord class. The current object's properties are all the fields for a record and all the GlideRecord methods. The property values are the values as they exist in the runtime environment.

The previous object is also automatically instantiated from the GlideRecord class. The previous object's properties are also all fields from a record and the GlideRecord methods. The property values are the values for the record fields when they were loaded from the database and before any changes were made. The previous object is not available for use in async Business Rules.

upvoted 1 times

✉️  **Bob\_Loblaw** 1 year, 5 months ago

**Selected Answer: A**

Yes, I think this should be about async business rules:

B. Can be a graphical representation of data: Reports in ServiceNow can include various graphical representations, such as charts and graphs, to provide visual insights into the data.

D. Can be run on demand by authorized users: Authorized users can generate reports on-demand to view real-time data or specific information from the ServiceNow instance.

E. Can be scheduled to be run and distributed by email: ServiceNow allows users to schedule reports to run at specific times and automatically distribute the results via email. This feature is useful for regular reporting and sharing information with stakeholders.

upvoted 1 times

✉  **Chanti1243** 1 month, 2 weeks ago

C  
UI Policy's Scripts execute before the UI Policy's Actions (Option C): This statement is accurate. When a UI Policy is triggered, its script runs first. The script evaluates conditions and performs any necessary modifications. If the conditions are met, the associated actions (such as hiding fields or setting field values) are then executed.  
upvoted 1 times

✉  **Chewes** 2 months, 1 week ago

**Selected Answer: A**

Just tested in my PDI.

Sample example:

- 1) on incident form write UI policy when state changes to closed; make short description as mandatory from UI policy action
- 2) from UI policy script execute if true; use below script

```
g_form.setMandatory('short_description', false);
```

Answer is A.

upvoted 1 times

✉  **manikanta\_gnbv** 2 months, 1 week ago

**Selected Answer: C**

I think the answer is C  
upvoted 3 times

✉  **MacGyver4th** 3 months, 3 weeks ago

**Selected Answer: C**

I tested this on the incident form in a Vancouver PDI by modifying the "Fields set to mandatory for all states" UI policy.

I changed the "When to Apply" condition to when the state was "In Progress"

I enabled "Run scripts" and added code in the "Execute if true" section

\*\*I keep getting bad gateway errors when I try to submit with the code\*\*

When the form loads, the caller and short descriptions fields are not mandatory. When I select "In Progress" for the state, after about 5 seconds the caller and short description fields become mandatory.

This tells me that the script runs before the actions.

The answer is C

upvoted 3 times

**evoken** 4 months, 1 week ago

In ServiceNow, UI Policies are used to dynamically change the behavior of form elements based on certain conditions. A UI Policy consists of both Scripts and Actions.

Scripts: These are JavaScript code snippets that execute when the conditions specified in the UI Policy are met. They are typically used for more complex logic and calculations.

Actions: These are predefined operations that can be applied to form elements when the conditions are met. Examples include showing or hiding a field, making a field mandatory, or setting a default value.

The correct order of execution is that the Scripts execute before the Actions. The JavaScript code in the Scripts section is evaluated first, and based on the results, the corresponding Actions are then executed.

So, option C is the correct statement.

upvoted 3 times

**D\_Ogi** 4 months, 2 weeks ago

A

<https://www.servicenow.com/community/developer-forum/which-executes-first-ui-policy-action-or-ui-policy-script/mp/2666819/highlight/true#M1034196>

upvoted 3 times

**HahaDesu** 10 months, 3 weeks ago

Hi I found the answer for this in the Scripting in ServiceNow Fundamentals - Tokyo page 157. The answer is A.

UI Policy Actions execute before UI Policy Scripts.

upvoted 3 times

**AccentureKiloGuru** 10 months, 3 weeks ago

**Selected Answer: A**

Tested it today in Utah, as well as in San Diego. Both times UI Policy Action got executed before UI Policy Script. So A must be correct

see my test:

UI Policy Action: Make field mandatory (which is not mandatory by default)

UI Policy Script:

```
function onCondition() {
    if(g_form.isMandatory("business_service"))
        g_form.addInfoMessage("Is mandatory");
    else g_form.addInfoMessage("Was not mandatory");
}
```

got result: "Is mandatory", so UI Action did proceed before UI Policy Script

upvoted 1 times

**MR126** 11 months, 2 weeks ago

UI Action first, confirmed in my instance:

1. in UI Action set : Filed name: Other; Mandatory: true

Load the form, result: filed Other is mandatory

2.

in UI Action set : Filed name: Other Mandatory: true;  
in Execute if true put: g\_form.setMandatory('other', false);

Load the form, result: field Other is not Mandatory

upvoted 1 times

 Naw210 1 year ago

**Selected Answer: C**

C is true because I tested on my PDI by using Alert pop ups in UI Policy Scripts, and the alert is show before the UI form is changed base on UI Policy

✉  **ravidamarla** 7 months, 2 weeks ago

Notice the template syntax. The function syntax is known in JavaScript as a self-invoking function or an Immediately Invoked Function Expression (IIFE). The function is immediately invoked after it is defined. ServiceNow manages the function and when it is invoked; developers do not explicitly call Business Rule scripts.

✉  **jesiegel** 11 months ago

When you pass an event, you pass a record and two parameters, this does not ask if you want to access the parameters, which would need the `\${event.parm1}` syntax, but it asks to access the properties of the event, which would be the record being passed with it. which can be accessed by using the field name directly. so `\${property\_name}` would work, and so should `\${property\_name.getDisplayValue}` to get its display value instead of actual value. the trigger for an event is `gs.eventQueue(<EVENT NAME>, <RECORD OBJECT>, PARM1, PARM2)` you can access a field within the record object by simply using `\${field\_Name}`

**Selected Answer: C**

UI actions is a server side artifact but it can also run on client. hence g\_user can be used on any client side scripts

upvoted 1 times

✉  **Lord\_Korvus** 9 months ago

**Selected Answer: C**

- is typically used in client scripts and UI policies but is also found in UI actions that run on the client.

- cannot be used in business rules or UI actions that run on the server.

Source: [https://developer.servicenow.com/dev.do#!/reference/api/utah/client/c\\_GlideUserAPI](https://developer.servicenow.com/dev.do#!/reference/api/utah/client/c_GlideUserAPI)

upvoted 1 times

✉  **MagdaGrs** 9 months, 3 weeks ago

**Selected Answer: C**

g\_user can be used on Client Side Scripts:

1. Client Script
2. UI Policy Script
3. UI Action (if client checkbox is true)

upvoted 1 times

✉  **hawful** 10 months, 3 weeks ago

**Selected Answer: C**

The correct answer is C, although GlideUser is not COMMONLY used in UI Actions, you can make a UI Action run client side. Running a UI action client side is also how you integrate GlideModal and other client operations with a UI Action.

Tricky question, but the answer is C.

upvoted 2 times

✉  **luissevero** 11 months, 4 weeks ago

Search in the doc UTAH version: "is typically used in client scripts and UI policies but is also found in UI actions that run on the client."

So, the correct answer is C.

upvoted 1 times

✉  **schaparro** 1 year ago

**Selected Answer: A**

The link being shared says that the GlideUser API cannot be used in UI actions that run on the server. This question doesn't specify if the UI Action runs on the client or on the server. For that reason, I believe the correct answer is A. The GlideUser is typically used in client scripts and UI policies. Unless it is specified where the UI Action is running I will not assume it is on the client side. A very tricky question indeed.

upvoted 2 times

✉  **snguru** 1 year ago

**Selected Answer: C**

"CAN" is a key word interpretation that needs to be understood for this question.

"Can be used in Client Scripts, UI Policies, and UI Actions" as is mentioned below. Read these details carefully.

you can run the ui action in client side

upvoted 1 times

✉ **REENA124** 1 year, 3 months ago

GlideUser

The GlideUser API provides access to information about the current user and current user roles. Using the GlideUser API avoids the need to use the slower GlideRecord queries to get user information.

The GlideUser methods and properties are accessed through a global object (g\_user) that is only available in client scripts. GlideUser contains name and role information about the current user.

is typically used in client scripts and UI policies but is also found in UI actions that run on the client.

cannot be used in business rules or UI actions that run on the server.

(Refer:[https://developer.servicenow.com/dev.do#!/reference/api/tokyo/client/c\\_GlideUserAPI](https://developer.servicenow.com/dev.do#!/reference/api/tokyo/client/c_GlideUserAPI))

## Question #25

When configuring a module, what does the Override application menu roles configuration option do?

- A. Users with the module role but without access to the application menu access the module
- B. Self-Service users can access the module even though they do not have roles
- C. Admin is given access to the module even if Access Controls would ordinarily prevent access
- D. Users with access to the application menu can see the module even if they don't have the module role

**Correct Answer: D**

Reference:

[https://hi.service-now.com/kb\\_view.do?sysparm\\_article=KB0716421](https://hi.service-now.com/kb_view.do?sysparm_article=KB0716421)*Community vote distribution*

A (100%)

**nsmcan** Highly Voted 2 years, 7 months ago

Correct answer is A.

The reference link, provided for the question, confirms that: Override application menu roles : Allows users to access this module even if they do not have permission to view the containing application menu. Users must still meet the role requirements for this module.

Correct Answer :A

upvoted 5 times

**manikanta\_gnbv** Most Recent 2 months, 1 week ago**Selected Answer: A**

A is correct

upvoted 1 times

**MagdaGrs** 9 months, 3 weeks ago**Selected Answer: A**

Use the Override application menu roles option to give module-level access to a role that is not authorized to see the application.

For example, assume the Special Occasions application menu requires the admin role and the Occasions module for the Special Occasions application requires the x\_snc\_employee\_spe.occasions\_user role.

The application-level requirement supersedes the module-level requirement which means that users with the x\_snc\_employee\_spe.occasions\_user role cannot see either the application or the module.

If the Override application menu roles option is selected, users with the x\_snc\_employee\_spe.occasions\_user role can see both the application and the module even though the user is not authorized by role to see the application menu.

Question #26

Topic 1

Which platform feature can be used to determine the relationships between field in an Import Set table to field in an existing ServiceNow table?

- A. Business Service Management Map
- B. Data Sources
- C. Transform Map
- D. CI Relationship Builder

**Correct Answer: C**

A transform map determines the relationships between fields displaying in an Import Set table and fields in an existing ServiceNow table, such as the Incidents or Users table.

Answer :C  
upvoted 9 times

✉  **MagdaGrs** Most Recent 9 months, 3 weeks ago

**Selected Answer: C**  
Whenever a session requests data, the system searches for access control rules that match the requested object and operation. If there is a matching access control rule, then the system evaluates if the user has the permissions required to access the object and operation. If an access control rule specifies more than one permission, then the user must meet all permissions to gain access to the object and operation. Failing any one permission check prevents the user from accessing the matching object and operation.  
If a user does not meet the permissions of the first matching rule, the system evaluates the permissions of the next matching access control rule as specified by the access control processing order. If the user fails to meet the permissions of any matching access control rule, the system denies access to the requested object and operation.

[https://developer.servicenow.com/dev.do#!/learn/learning-plans/rome/new\\_to\\_servicenow/app\\_store\\_learnv2\\_buildneedit\\_rome\\_application\\_scope](https://developer.servicenow.com/dev.do#!/learn/learning-plans/rome/new_to_servicenow/app_store_learnv2_buildneedit_rome_application_scope):

Scope protects an application, its files, and its data from conflicts with other applications.

Scope determines which parts of an application are available for use by other applications in ServiceNow.

Scope allows developers to configure which parts of their application can be acted on by other applications.

Scope prevents work done in the main ServiceNow browser window (not in Studio) from becoming part of an application's files.

Question #36

Topic 1

It is best practice to define the business requirements and the process(es) an application will manage as part of the application development plan. What are some of the considerations to document as part of the business process?

- A. Business problem, data input/output, users/stakeholders, and process steps
- B. Business problem, data input/output, project schedule, and process steps
- C. Business problem, data input/output, users/stakeholders, and database capacity
- D. Business problem, users/stakeholders, available licenses, and database capacity

**Correct Answer: A**

*Community vote distribution*

A (100%)

✉  **Dekoreh** 8 months ago

**Selected Answer: A**

A is correct  
upvoted 1 times

✉  **Lord\_Korvus** 9 months ago

**Selected Answer: A**

Explanation:

Business problem - If you are not solving a business problem, you do not need an application.

Stakeholders - Requestor and Filler, Application Administrator , Management.

Users - Personas largely equate to Roles in ServiceNow.

Inputs - can take many forms such as Users, spreadsheets, and web services.

Outputs: can also take many forms such as dashboards, reports, and email.

Process Steps - There are many strategies for defining a process, such as SIPOC(Six Sigma), ASME Standard for Process Charts, and others. Choose a strategy that works well for you.

## Question #39

Which objects can be used in Inbound Action scripts?

- A. current and previous
- B. current and email
- C. current and event
- D. current and producer

**Correct Answer:** C

*Community vote distribution*

B (100%)

✉️  **kundgir** Highly Voted 2 years, 7 months ago

Should be B. There is no access to event in inbound action  
upvoted 14 times

✉️  **Jyoti18** Highly Voted 1 year, 11 months ago

Technically both B and C are correct:

```
(function runAction(/*GlideRecord*/ current, /*GlideRecord*/ event, /*EmailWrapper*/ email, /*ScopedEmailLogger*/ logger) {
    // Implement email action here
    })(current, event, email, logger);
    upvoted 14 times
```

✉️  **MacGyver4th** Most Recent 3 months, 3 weeks ago

I agree that B and C are correct.  
As Jyoti18 pointed out, the available objects are:  
current, event, email, logger, classifier)

This the function that populates in my Vancouver PDI:

```
(function runAction(/*GlideRecord*/ current, /*GlideRecord*/ event, /*EmailWrapper*/ email, /*ScopedEmailLogger*/ logger, /*EmailClassifier*/ classifier) {
```

// Implement email action here

```
})(current, event, email, logger, classifier);
    upvoted 1 times
```

✉️  **fe91db0** 5 months, 3 weeks ago

**Selected Answer: B**  
event is deprecated  
upvoted 3 times

✉️  **IT4life** 7 months, 1 week ago

You cannot use current and email in Inbound Action scripts. The current and email objects are only available in the context of an inbound email action. The current and previous objects are the only objects available in Inbound Action scripts for the following reasons:

(1) The current and previous objects allow you to access the current and previous records in the context of an inbound email action.

(2) The current and previous objects are the only objects that contain information about the email message that triggered the inbound email action.

(3) The current and previous objects are the only objects that contain information about the records that are associated with the email message that triggered the inbound email action.

(4) The current and previous objects are the only objects that contain information about the user who sent the email message that triggered the inbound email action.

(5) The current and previous objects are the only objects that contain information about the inbound email action that was triggered by the email message.

Therefore, the current and previous objects are the only objects used in Inbound Action scripts for this reason. The correct answer is A  
upvoted 1 times

✉️  **Mru9** 9 months, 2 weeks ago

**Selected Answer: B**

event is deprecated in inbound email action  
upvoted 3 times

✉ **\_Susan\_** 1 year, 2 months ago  
B and C are correct: [https://docs.servicenow.com/bundle/tokyo-servicenow-platform/page/administer/notification/task/t\\_CreatingAnInboundEmailAction.html](https://docs.servicenow.com/bundle/tokyo-servicenow-platform/page/administer/notification/task/t_CreatingAnInboundEmailAction.html)  
upvoted 2 times

✉ **fivani** 1 year, 2 months ago

**Selected Answer: B**  
Definitely B - current and email  
"event" really has no purpose as inbound email actions are always triggered by "email.read".  
upvoted 3 times

✉ **Zolly** 1 year, 3 months ago

Utah PDI: When checking System Policy > Email > Inbound Actions and creating new Inbound action

The function runAction() Has parameters current,event,email

However event is striked and marked as deprecated, that's why B is correct.

upvoted 5 times

✉ **SergioVSJ** 1 year, 4 months ago

**Selected Answer: B**  
Correct answer is B.  
Event is a parameter of the function, that gives access one of the parameters of the originating event. For example, event.parm1 accesses the first parameter of the event or event.parm2 for the second parameter.  
Inbound actions are not generated by an event.  
[https://docs.servicenow.com/bundle/tokyo-servicenow-platform/page/administer/notification/task/t\\_CreatingAnInboundEmailAction.html](https://docs.servicenow.com/bundle/tokyo-servicenow-platform/page/administer/notification/task/t_CreatingAnInboundEmailAction.html)

upvoted 2 times

✉ **Pranesh\_RP** 10 months, 2 weeks ago

**Selected Answer: D**

Update Set is the source control operation used to store local changes on an instance for later application.

Branch is actually used to isolating new feautures, bugs, or experiment. To work on your independent changes without directly affecting the actual codebase

upvoted 1 times

✉ **YMijoe** 1 year ago

I am leaning more towards stashing.

"Stashing in source control saves local changes for an application to apply later. The local changes do not need to be committed to the remote repository. Stashing a change removes the change from the current application and saves the change for a developer to later apply or delete."

[https://developer.servicenow.com/dev.do#!/learn/learning-plans/utah/new\\_to\\_servicenow/app\\_store\\_learnv2\\_devenvironment\\_utah\\_stashing\\_changes#:~:text=To%20stash%20something%20is%20to%20stc%20that%20something,for%20a%20developer%20to%20later%20apply%20or%20delete.](https://developer.servicenow.com/dev.do#!/learn/learning-plans/utah/new_to_servicenow/app_store_learnv2_devenvironment_utah_stashing_changes#:~:text=To%20stash%20something%20is%20to%20stc%20that%20something,for%20a%20developer%20to%20later%20apply%20or%20delete.)

## Question #46

A scoped application containing Flow Designer content dedicated to a particular application is called a(n):

- A. Spoke
- B. Bundle
- C. Action
- D. Flow

**Correct Answer: A**

A spoke is a scoped application containing Flow Designer content dedicated to a particular application or record type. Flow Designer provides a set of core actions to automate Now Platform® processes. You can add application-specific core actions by activating the associated spoke.

[https://developer.servicenow.com/dev.do#!/learn/learning-plans/utah/new\\_to\\_servicenow/app\\_store\\_learnv2\\_securingapps\\_utah\\_securing\\_table\\_records](https://developer.servicenow.com/dev.do#!/learn/learning-plans/utah/new_to_servicenow/app_store_learnv2_securingapps_utah_securing_table_records)

upvoted 1 times

✉ **Hmzpks** 7 months, 1 week ago

Correct answer is B

Access Controls are automatically created when tables are added to scoped applications. The four default Access Controls grant access to the table's records. Permission is granted for these operations:

Create  
Read  
Write  
Delete

[https://developer.servicenow.com/dev.do#!/learn/learning-plans/tokyo/new\\_to\\_servicenow/app\\_store\\_learnv2\\_securingapps\\_tokyo\\_securing\\_table\\_records](https://developer.servicenow.com/dev.do#!/learn/learning-plans/tokyo/new_to_servicenow/app_store_learnv2_securingapps_tokyo_securing_table_records)

upvoted 1 times

✉ **Nik50** 7 months, 2 weeks ago

When creating a table in a privately-scoped application in ServiceNow, the system automatically generates four Access Control Lists (ACLs) for the table to provide basic access control. These ACLs control the following CRUD operations:

Create: This ACL controls the ability to create new records in the table. It ensures that only users with the appropriate roles or permissions can add new records to the table.

Read: This ACL controls the ability to view or read records in the table. It ensures that only users with the appropriate roles or permissions can

access the data stored in the table.

Update: This ACL controls the ability to modify or update records in the table. It ensures that only users with the appropriate roles or permissions can make changes to the data stored in the table.

Delete: This ACL controls the ability to delete records in the table. It ensures that only users with the appropriate roles or permissions can remove records from the table.

**Selected Answer:** ACE

Must have email, must have notification enabled and should be active

upvoted 5 times

✉ **sstest2** Most Recent 5 months, 2 weeks ago

**Selected Answer:** CDE

A don't agree with "A". Active must be true? Active what? I know SN troubleshooting article lists a use case where if Incident is no longer active, the email is not sent out because Incident Opened email notification has a condition of [active] [is] [true]. But that is a single case, and hardly can be applied to troubleshooting all email notifications.

C - because notifications must be enabled

D - because locked users cannot receive emails by design: [https://support.servicenow.com/kb?id=kb\\_article\\_view&sysparm\\_article=KB0859406](https://support.servicenow.com/kb?id=kb_article_view&sysparm_article=KB0859406)

E - because user will not get email if their email field is empty

upvoted 2 times

✉ **sstest2** 5 months, 2 weeks ago

Questing reads "what must be done on the user table", so correct answer must be ACDE

A-user is active

C-notification set to 'enabled'

D-user is not locked out

E-user email field is not empty

## Question #89

You are developing the MyApp application that has a table, Table A. When the MyApp application is installed on an instance, you want Table A's records to be installed as part of the application.

Table A's records will be installed when:

- A. Table A is active and extends the Task table
- B. Table A's records are added to the application record using the Create Application Files context menu item
- C. Table A has an automatic number counter for new records
- D. Table A is not included in the System Clone > Exclude Tables list

**Correct Answer: A**

## Question #104

The Task table is an example of which of the following? (Choose two.)

- A. Parent class
- B. Legacy class
- C. Child class
- D. Base class

**Correct Answer:** CD

*Community vote distribution*

AD (100%)

✉️  **Bob\_Loblaw** Highly Voted 1 year, 5 months ago

My answer is A & D. There's no search result for "legacy class" and Task is (I believe) a parent class, it doesn't extend any table, so it wouldn't be a child class to anything.

"A table that extends another table is called a child class, and the table it extends is the parent class" - this is about halfway down in this link below  
<https://docs.servicenow.com/en-US/bundle/tokyo-platform-administration/page/administer/table-administration/concept/table-extension-and-classes.html>

upvoted 9 times

✉️  **Stardust85** 1 year, 5 months ago

Sure. And a base class is a class that doesn't extend any other table. You can check System Definition -> Tables to see that Task doesn't extend a table. Source: <https://docs.servicenow.com/en-US/bundle/tokyo-platform-administration/page/administer/table-administration/concept/table-extension-and-classes.html> (search for "base class")

## Question #108

When selecting a data type for a field that will be displayed on a form, which of the following statements is NOT correct?

- A. Use the String data type for a free-form text field
- B. Use the Phone Number data type to automate phone number data validation
- C. Use the Choice data type to limit options in a field
- D. Use the Date data type to enter the date and time of day

**Correct Answer:** D

*Community vote distribution*

D (68%)

B (32%)

 **Bob\_Loblaw** Highly Voted 1 year, 5 months ago

**Selected Answer: B**

There's no "phone number" data type.  
upvoted 5 times

 **AR1970** 1 year, 5 months ago

There is "phone number" data type. On form go to configure->form layout->create new field-> "data type-phone number" will be there in the available data types.  
upvoted 3 times

 **pazorische** Most Recent 3 months ago

**Selected Answer: D**

D is true  
upvoted 2 times

 **xheniinehx** 3 months, 1 week ago

D) To show Date and Time, the data type Date/Time needs to be selected  
upvoted 2 times

 **sstest2** 5 months, 2 weeks ago

**Selected Answer: D**

Phone number exists and does validation  
upvoted 1 times

 **Nolanmowa** 5 months, 1 week ago

Hello. Have you appeared for the test? And are these dumps enough to clear the exam (vancouver version)??  
upvoted 1 times

 **Adam2023** 5 months, 2 weeks ago

**Selected Answer: B**

Phone Number data type does not exist.  
upvoted 1 times

 **GoMaggie02** 6 months, 3 weeks ago

**Selected Answer: D**

D - read carefully! Date and Time, not just date.  
upvoted 2 times

 **LucasDom** 1 year ago

**Selected Answer: D**

The data type Phone Number exists and also validates the Format so B is not the correct answer. The Date data type only is there for the date and not the time. That would be the Date/Time data type field.

Question #138

Client-side scripts manage what?

- A. User access
- B. Database and backend
- C. Playbook access
- D. Forms and Form Fields

**Correct Answer:** D

Question #139

Topic 1

When debugging Email Notifications, what must you check on a user record? (Choose two.)

- A. Active must be true.
- B. The Email field must have a valid value.
- C. The user must not be locked out.
- D. The First name and Last name fields must have values.
- E. Delegation must be enabled.

**Correct Answer:** AB

Question #140

Topic 1

When crafting a scoped application that contains flow actions, what is the application called?

- A. Action
- B. Spoke
- C. Bundle
- D. Flow

**Correct Answer:** B

Question #141

Topic 1

Which are reasons an application could be developed on the ServiceNow platform? (Choose three.)

- A. It needs workflow to manage processes.
- B. It requires reporting capabilities.
- C. It uses forms extensively to interact with data.
- D. It requires low-level programming libraries.
- E. It uses multimedia features.

**Correct Answer:** ABC

Question #142

Topic 1

Once an application is ready to share, which of the following methods of publishing are supported by ServiceNow? (Choose three.)

- A. Publish to an application repository
- B. Publish to a local drive
- C. Publish to the ServiceNow Store
- D. Publish to an Update Set
- E. Publish to a spreadsheet
- F. Publish to a local USB device

**Correct Answer:** ACD

## Question #143

Topic 1

What is required to link a ServiceNow application to a Git repository? (Choose three.)

- A. URI
- B. ACL
- C. Application name
- D. Password
- E. User name
- F. URL

**Correct Answer:** ADE

DEF (100%)

✉️  **Chanti1243** 1 month, 2 weeks ago

A,D&E

Remember that options B (ACL), C (Application name), and F (URL) are not directly related to linking a ServiceNow application to a Git repository. Instead, focus on the URI, user name, and authentication credentials for successful integration.

## Question #144

Topic 1

What is the Endpoint when configuring a REST Message?

- A. The URI of the WebServer
- B. The command to the REST script to stop execution
- C. The URI of the data to be accessed, queried, or modified
- D. The provider response indicates there is no data to send back

**Correct Answer:** C

## Question #145

Which client-side scripts apply to Record Producers? (Choose two.)

- A. Fix Scripts
- B. Catalog Client Scripts
- C. UI Scripts
- D. Catalog UI Policies
- E. Record Producer Policies

**Correct Answer:** BD

## Question #146

Which business requirements and process(es) should be documented as part of the application development plan? (Choose four.)

- A. Available licenses
- B. Business problem
- C. Process steps
- D. Users/stakeholders
- E. Database capacity
- F. Project schedule
- G. Data input/output

**Correct Answer:** BCDG

## Question #147

Which objects are used as part of the client-side scripting API? (Choose two.)

- A. gs
- B. current ana previous
- C. g\_user
- D. workflow.scratchpad
- E. g\_form

**Correct Answer:** CE

Question #148

Topic 1

When creating application tables, a user role is automatically added to the table record. Which other role does an application typically have?

- A. Application Super User
- B. Application Fulfiller
- C. Application Admin
- D. Application Manager

**Correct Answer:** C

Question #149

Topic 1

Which determines the relationships between field in an Import Set table to field in an existing ServiceNow table?

- A. Data Sources
- B. Schema Map Relationship Builder
- C. Business Service Management Map
- D. Transform Map

**Correct Answer:** D

## Question #150

What data types of Flow Designer variables are supported to store record data and complex data? (Choose three.)

- A. Label data type
- B. Integer
- C. Array.Reference
- D. Choice
- E. String

**Correct Answer:** BCE
